

LONDON DRYWALL LIMITED

Environmental Policy

London Drywall was established in 1999 and installs drywall partitions to innovative design requirements and demanding fire and acoustic specifications. It operates mainly within the City of London. It is our company's desire to help build exemplar developments in terms of sustainability that drives our environmental performance. We are committed to demonstrable environmental management and we do this from not only a moral and ethical standpoint on behalf of our directors, staff, our children and future generations but also because it makes good business sense.

The company accepts responsibility for operating the business, and procuring and installing our works in ways which protect and preserve the environment. This policy is aimed at minimising the emission of pollutants to air, water and land, and the preservation of natural resources by reducing consumption and using, wherever possible, renewable sustainable resources.

The practical implementation of this policy involves:-

1. The monitoring, through regular Management Reviews, of all aspects of the Company's impacts on the environment and ensuring that environmental factors are included in all key business decision processes.
2. Full commitment to continual improvement in environmental performance by the setting and monitoring of environmental objectives and targets through the Management Review framework in order to reduce and prevent pollution.
3. Ensuring compliance with environmental legislation and other requirements (e.g. voluntary agreements).
4. Minimising the production of waste, pollution and consumption of natural resources and ensuring maximisation of waste recycling and the re-use of materials.
5. Influence suppliers, subcontractors and other business partners to adopt environmental best practise and subscribe to equivalent environmental standards.
6. The formation of a distribution and delivery policy that minimises environmental effects on local biodiversity.
7. Identify and manage key risks and have suitable procedures in place for the management of environmental incidents and emergencies.
8. Communication of this policy to all members of staff and operatives, and providing necessary training and resources required to implement it.
9. Communicating / engaging in dialogue with interested parties.
10. All timber and timber derived products that we use must hold the FSC or PEFC Chain of Custody certification.

For and behalf of London Drywall Limited,

John Conway
Managing Director
